PRESS RELEASE

Sliema, Malta, 30th October 2007

setcom announces support for Device Management 1.2 (DM 1.2)

setcom are pleased to announce immediate support for Conformance Testing of Device Management v1.2 in response to the growing importance of Device Management within the wireless industry.

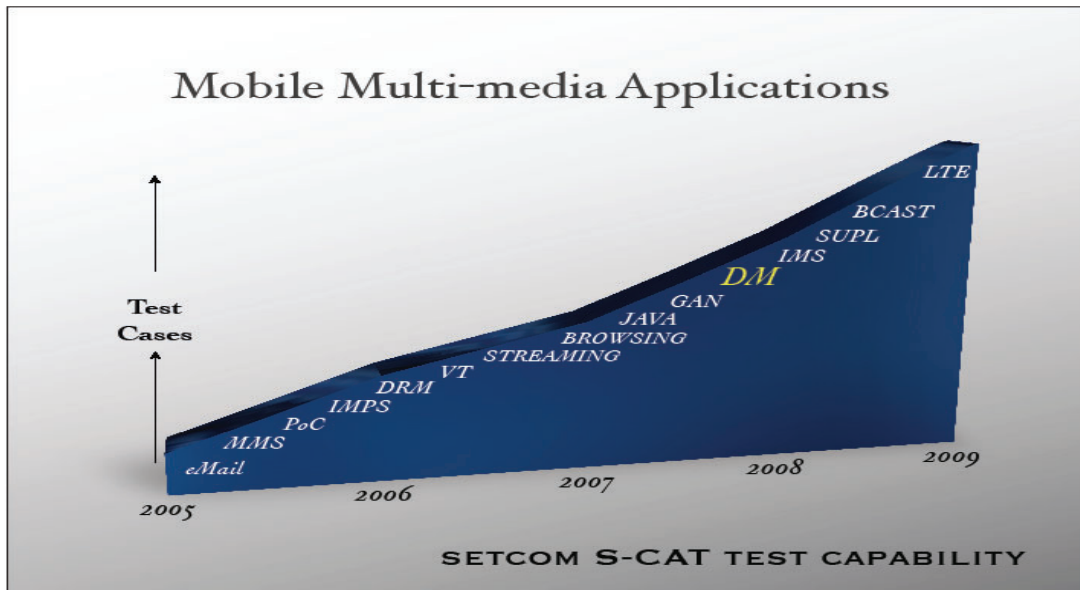

Device Management enables remotely controlled distribution of applications, data and configuration settings to any one handset or groups of handsets. DM functionalities include:

- * FOTA - Firmware over the air updates
- * Remote Configuration and Provisioning
- * Diagnostics
- * Security
- * Backup/Restore

Open Mobile Alliance (OMA) has defined 48 test cases for Device Management 1.2 mobile Conformance testing. setcom has validated 39 DM1.2 test cases using two independent DM implementations. This validation effort was the result of collaborative partnerships with leading mobile terminal manufacturers and permitted setcom to be the ONLY test system supplier to have a valid test platform for DM1.2 Conformance testing. All mobiles containing an OMA DM1.2 client are required to be certified as mandated by GCF and PTCRB conformance test requirements.

Cont/d..

With the addition of DM1.2 test capability, the setcom S-CAT continues to lead the market testing more than 12 application enablers using only one GUI.

S-CAT: One Tool, One GUI, Multiple Applications, for UE Development, IOT and Conformance.

“setcom set themselves the goal of being at the forefront of wireless testing technology”, commented Markku Niiranen, Managing Director of setcom wireless products Ltd in Malta. “The S-CAT platform continues to be the most widely accepted test platform for testing Multi-media mobile applications. Being first to market with this launch of DM1.2 application test tools demonstrates, once again, our leadership in wireless testing.”

About Setcom (www.setcom.eu)

setcom, whose roots go back to 1989 in Munich, Germany, is an independent technology supplier of test solutions for the digital wireless communications industry. These test solutions address signalling protocol testing for GSM, GPRS, EDGE and UMA/GAN devices as well as testing of mobile terminal applications such as MMS (multimedia message service), PoC (push to talk over cellular), email, Java and Video Telephony. The company's goal is to help reduce its customer's development cost and shorten their time to market.
