Sliema, Malta – 26th July 2007

Java test development platform for Mobile Devices

setcom wireless products Ltd., (Malta) announced that it has released forty (40) test case scripts for Java on its application test platform (S-CAT). The Java test procedures have been accepted by PTCRB (as defined by the JSR Test Group) and test execution is now mandatory. The Java test platform is an essential tool for development labs and certification labs to ensure conformance to Industry standards.

Examples of the testing the Java environment:

Data reliability - For example, the UE turned off or loss of battery, ensure consistency of data on the UE memory and removable memory.

Support for simultaneous key presses

Download and install a MIDlet of different JAD/JAR sizes

Launch a browser through Platform Request

Test video playback performance (rendering rate)

Verify that MIDlets can be installed and executed in the UE menu. For example, download high quality banking application MIDlets and perform secured online banking activities.

With the addition of Java, the S-CAT platform now supports the testing of ten (10) multimedia mobile applications (MMS,VT, PoC, DM, IMPS, DRM, Browsing, Streaming, e-Mail,) and encompasses five hundred plus (500+) tests for mobile multimedia applications. These applications may also be tested over wireless LAN (W-LAN) protocols on UMA/GAN.

The S-CAT....ONE Tool...ONE GUI... MULTIPLE Applications for UE development, IOT Verification and Conformance Testing.

Java testing is applicable to 3G Americas compliant Java Devices as defined in "GSMNA Java Test Requirements for 3G Americas Java Technical Recommendations, rev.1.23 from January, 7, 2007".

The Test Requirements can be downloaded from the GSM NA's website.

About setcom (www.setcom.eu)

setcom, whose roots go back to 1989 in Munich, Germany, is an independent technology supplier of test solutions for the digital wireless communications industry. These test solutions address signalling protocol testing for GSM, GPRS, EDGE and UMA/GAN devices as well as testing of mobile terminal applications such as MMS, VT, PoC, DM and Java. The company's goal is to help reduce its customer's development cost and shorten their time to market.
