setcom announces strategic partnership with Paralink

setcom and Paralink to offer leading testing solutions to the Asian wireless market

setcom today announced a new strategic partnership with wireless test and measurement solutions provider, Paralink Networks, Inc. This collaboration will provide high quality test solutions and comprehensive engineering support to the Chinese and Taiwanese region. Paralink offer their vast experience in supporting the wireless market space, while setcom provide market leading handset test solutions. The partnership will enable setcom and Paralink to deliver the highest quality in handset testing, customer support and engineering services.

“setcom recognises that China and Taiwan are extremely important territories in the development of mobile communication devices,” said Peter Lund, President Worldwide Sales at setcom. “We are delighted that Paralink are our partner for China and Taiwan. setcom will continue to offer our market leading test solutions while Paralink will supply leading edge development and technical support to our customers”.

“setcom has long been accepted as the leading supplier of testing solutions to the wireless handset market,” said Chung-Li Yu, President of Paralink Networks, “With the expert support of the Paralink engineering team, the partnership will be able to offer a first class service to our customers in China and Taiwan”.

About setcom (www.setcom.eu)

setcom, whose roots go back to 1989 in Munich, Germany, is an independent technology supplier of test solutions for the digital wireless communications industry. These test solutions address signalling protocol testing for GSM, GPRS, EDGE and UMA/GAN devices as well as testing of mobile terminal applications such as MMS (multimedia message service), PoC (push to talk over cellular), email and Video Telephony. The company's goal is to help reduce its customer's development cost and shorten their time to market.

About Paralink (www.paralink.com.tw)

Paralink Networks delivers a comprehensive family of innovative testing tools and advanced technology solutions for datacom and telecom industry, with the objective of being the leading provider of products to maximize the performance, quality and reliability of network.
