setcom wireless increase investment in global support

setcom to make significant additions to number of global support engineers

setcom today announce that they have recruited additional engineers to offer their customer base comprehensive global support. These new engineers will be located in both the setcom development centres (Munich and Malta) as well as in the major handset development regions of Asia Pacific and USA. These new engineers will complement the existing support team at setcom and will also provide more localised technical support and service.

“After spending more than 10 years in a support role at one of the top three global handset manufacturers, I know how important it is to offer a truly global support structure to your end customer,” said Chris Wronski, one of the new recruits to the setcom support team and who will be located in Chicago office, “I look forward to working at a high technology company such as setcom which is growing so rapidly”.

“setcom have shown a tremendous rate of growth over the past eighteen months,” said Markku Niiranen, Managing Director of setcom wireless products Limited, “however, to support our many new and existing customers in the way setcom wishes, we understand that we need to invest some of these new revenues in additional customer support engineers. I am pleased to welcome all of my new colleagues and wish them well in their future careers with setcom.”

setcom (www.setcom.eu)

setcom, whose roots go back to 1989 in Munich, Germany, is an independent technology supplier of test solutions for the digital wireless communications industry. These test solutions address signalling protocol testing for GSM, GPRS, EDGE and UMA/GAN devices as well as testing of mobile terminal applications such as MMS (multimedia message service), PoC (push to talk over cellular), eMail and Video Telephony. The company's goal is to help reduce its customer's development cost and shorten their time to market.
